

Qualitäts - Maßstäbe

Top quality for ADGA 250

The quality measuring stick has precision springs made from hardened steel. This ensures wear-free and durable suspension. The joint always keeps smooth-running and lockable.

It is ideally suited for height measurements due to the low bowing of the sturdy sections and the low weight of the precision springs. The rivet head (pivot) of the solid rivets turns on a plastic washer. Therefore, the joint connection with the tempered spring is designed for continuous load.

The sections have no notches on the side, therefore it is possible to draw a straight marking line. The tight fitting sections allow filigree advertising imprints on the sidefaces.
